

# Full Fender (Axle Mount)

## Instruction Manual

FF002

*Please read all instructions before installing and using your new fenders.*

*Please note: These fenders mount to the axle rather than the frame's eyelets. Always check that axle nuts are tight before riding.*

### Warning

Failure to install fenders properly may result in serious injury/death and or damage to your bicycle.

## Installation

### FRONT

1. Place fender through fork until fender tab aligns to brake mount hole (A). Do not mount
2. Install struts to fender with supplied hardware.
3. Remove axle nuts and install struts using a washer on both sides if available. (See illustration B)
4. Install bolt through fender tab and into fork. Adjust clearance and struts and tighten.
5. Tighten axle nuts and double check all bolts are secure.
6. Spin wheel to check for tire rub or clearance issues.

### REAR

1. Attach struts to fender body using supplied hardware.
2. Slip fender and struts onto rear wheel positioned so that the fender mounting tab is aligned with the chainstay bridge mounting hole. Bolt in place.
3. Remove axle nuts and install struts using a washer on both sides if available. (See illustration B)
4. Tighten axle nuts and double check all bolt are secure.
5. Spin wheel to check for tire rub or clearance issues.

Note: Minor bending of struts outward may be necessary on some frames, this is normal and will not compromise structural integrity.
