

*Please read all instructions before installing and using your saddle.*

*Be sure to position the saddle so that it sits within the limit markings on the seat rails.*

## Warning

Failure to tighten the saddle clamp properly may result in serious injury/death and or damage to your bicycle.

## Installation/Use

### Rail Saddle (with clamp)

1. Loosen the nut and bolt system for the clamp.
2. Slide the saddle onto the seat post.
3. Be sure to adjust the seat angle and position before tightening completely. The seat should sit level with the ground and be positioned within the markings on the seat rails. Failure to do so may result in broken saddle rails.
4. Once the saddle is in the most favorable position, tighten the saddle clamp nuts and bolts with average to heavy force making sure the saddle has absolutely no play.

### Rail Saddle (no clamp)

1. Loosen the bolt(s) on the seat post and spread the clamps open.
2. Slide the rails of the saddle into the clamps and begin to tighten the clamp bolts.
3. Be sure to adjust the seat angle and position before tightening completely. The seat should sit level with the ground and be positioned within the markings on the seat rails. Failure to do so may result in broken saddle rails.
4. Tighten the saddle clamp bolts with average to heavy force making sure the saddle has absolutely no play.
